ACCADUEO 2012, the foremost exhibition in the water sector, is at the preparation stage. Many new features are in the pipeline, including a focus on technological innovation and the international IWA Water Loss conference

Ferrara, 23-25 May 2012

www.accadueo.com

The 2012 edition of ACCADUEO, the international exhibition of technologies for treatment and distribution of drinking water and wastewater treatment organised by BolognaFiere, will be held from 23 to 25 May in the Ferrara exhibition centre with the aim of **further strengthening its leadership position** within the industry.

Now in its eleventh edition, **ACCADUEO** is increasingly seen as a key meeting point for exhibiting companies and public and private businesses. The 2010 event achieved excellent results, including the presence of **271 exhibitors in a space of more than 15,000 sq.m**, attendance by **6,775 highly qualified professional visitors** from leading Italian and foreign companies, the participation of important institutes and associations, and a wide range of new products on display.

ACCADUEO remains the leading event for the industry at an international level and offers exhibitors and visitors excellent opportunities to generate business and pursue professional growth in the water and gas sectors.

The extensive programme of conferences and technical seminars featuring addresses by internationally renowned speakers will be one of the main attractions of the 2012 show, offering industry professionals outstanding opportunities for dialogue and professional growth. To support the internationalisation of the event and to make it easier for professionals to meet and establish business contacts with countries involved in major water service modernisation projects, Accadueo will be organising a large-scale promotional programme to attract trade missions from North African countries.

Accadueo will be promoting itself with renewed vigour and dynamism as a platform for technological innovation. The New Products/Inventions Guide, distributed to all visitors to the exhibition, will feature the new products/inventions submitted by the producers exhibiting at the show and will for the first time be complemented by an exhibition entitled **Showcase of Innovation**. This exhibition, devoted to a selection of new products from exhibitor companies, will be curated by a special technical/scientific commission of experts from water service management companies.

The programme of **ancillary events** at ACCADUEO 2012 will include the **international conference WaterLossEurope2012**, the most prestigious European technical and scientific event for the sector. Organised by the IWA Water Loss Specialist Group in cooperation with BolognaFiere, the University of Ferrara and leading institutions and companies in the sector, it will be held in parallel with ACCADUEO from 23 to 25 May 2012 at the University of Ferrara and in the exhibition spaces of H2O. The aim of the conference is to explore the theme of water mains supply losses within the specific context of the needs of the European and Mediterranean market. It will provide an opportunity to address complementary and compatible issues such as regulation so as to help reduce losses and promote energy efficiency, economic aspects and water efficiency incentive measures, including proposed incentives for efficient management of water resources. For more detailed information, see www.waterlosseurope.com

Again in 2012 ACCADUEO will be held simultaneously with the gas transport and distribution exhibition **CiAccaQuattro**, offering visitors a broader picture of the world of fluid transport and distribution networks, and with **H2O INDUSTRY**, focusing on the technologies, treatment systems, equipment and services devoted to industrial water treatment (supply, process, waste water).

Bologna, November 2011
