

BOLOGNA WATER & ENERGY

The protagonists of the energy transition

Bologna 5 October 2021 - From 6 to 8 October 2021, the Bologna Exhibition Centre will host an exhibition and conference platform that will address the key issues of water and energy in detail. Six events are scheduled, organised by BolognaFiere and Mirumir. The two companies have set up a **new JV – BolognaFiere Water&Energy** – that will be operational from 2022, owned 75% by BolognaFiere and 25% by Mirumir.

The energy transition, the sound and responsible use of energy resources, new energy vectors and the evolution of scenarios from a perspective of environmental sustainability are issues at the heart of profound transformations that involve, transversally, every sphere of production and life. The connection between these issues and the innovation trends they are inspiring are at the basis of a new exhibition platform that this year presents itself to operators with 6 events that will enhance existing synergies, thanks to a highly integrated vision. Issues that are at the forefront of the EU directives for the Green Deal are at the centre of the debates about development plans for industrial districts (which are particularly represented in Emilia-Romagna), tomorrow's agriculture, the processing industry, the buildings of the future, transport and new mobility involving dedicated energy sources and services.

The events that are part of the platform are:

- **H2O** – the International Water Exhibition (technologies, treatment, distribution and sustainability)
- **CH4** – the exhibition for gas distribution technologies and systems
- **HESE-Hydrogen Energy Summit&Expo** – the national event dedicated to technologies for the production, transport and storage of hydrogen
- **ConferenzaGNL** – the international event dedicated to the promotion of the LNG (Liquefied Natural Gas) industry
- **Fuels Mobility** – the national event dedicated to technologies for service stations and sustainable mobility
- **Dronitaly** – the national event dedicated to the professional uses of drones.

H2O - the International Water Exhibition; CH4 - the specialist event for gas technologies and distribution systems; HESE - Hydrogen Energy Summit&Expo the national event dedicated to technologies for the production, transport and storage of hydrogen; ConferenceGNL- the international event dedicated to the promotion of the Liquefied Natural Gas industry; Fuels Mobility - the national event for technologies for service stations and sustainable mobility and Dronitaly - the national event dedicated to the professional uses of drones, are the events that form the BolognaFiere Water&Energy exhibition platform – a joint venture created by BolognaFiere (75%) and Mirumir (25%). Operational from 2022, the event will be the Italian forum where public and private organisations can meet and discuss, at national and international level, how water, energy and technological applications can affect the socio-economic development of our country and beyond. The platform will provide tangible and innovative support on the pathway that Italy is pursuing towards the ecological transition.
